## Broken internal images

**i** *About this issue: An internal broken image is an image that can't be displayed because it no longer exists, its URL is misspelled, or because the file path is not valid. Broken images may jeopardize your search rankings because they provide a poor user experience and signal to search engines that your page is low quality. How to fix: To fix a broken internal image, perform one of the following: 1. If an image is no longer located in the same location, change its URL. 2. If an image was deleted or damaged, replace it with a new one. 3. If an image is no longer needed, simply remove it from your page's code*
